Top/Bottom Pairs

You might have noticed when you switched in and out of chat that if you are typing in the middle of a quote in a chat window, it goes to the top of the chat window! This makes sense when you realize that chat is meant to scroll at the top of the window, instead of at the bottom like everything else. This can cause an issue if someone is typing a quote in a chat window when they suddenly ‘jump’ to the top of the chat window as it is being typed. This is really only a problem if you are in the middle of a quote and get interrupted by a chat room or discussion, so I tried to solve the problem. To solve this, go to “Edit” =>

“Copy” (this is from the old Settings menu) => “Paste” => “Text” and then select “Original” from the “Text” menu. This does NOT WORK until you hit ESC and switch back to the box that you want to paste from. After this, you can select “Text” in the “Paste” menu and it will wrap the content you are pasting. You can also hit Ctrl-V on your keyboard to paste text. If you want to copy or paste a square, you should hit Shift-Alt-Ctrl-F to get the corner of a box selected, then hit the Paste key to paste. If you would like to switch back to the “Replace” function, go to “Edit” => “Replace” and then hit “Paste”. You can toggle between these functions as much as you want by pressing the “Ctrl”

key. If you want the window to scroll at the bottom, you can click on the “Bullet” button or press “Alt-0” to make the chat window scroll to the bottom. If you have more tips, post them in the comments section! To have your first post notification when it gets published, click on the envelope icon at the top right of the main chat window. Have fun! Simulate This Tab Choose what tab to simulate and be returned to the main chat window with the selected tab after. Click the ►► icon to simulate a 754eb5d184
